Maintenance, Asset, Callback and Report Management System

Version 1.0

Prepared for NLETA users

1. Introduction

The NLETA dashboard is a role-based web application used to manage lifts and other assets, maintenance schedules, technician assignments, callbacks, work reports, approvals, and operational records.

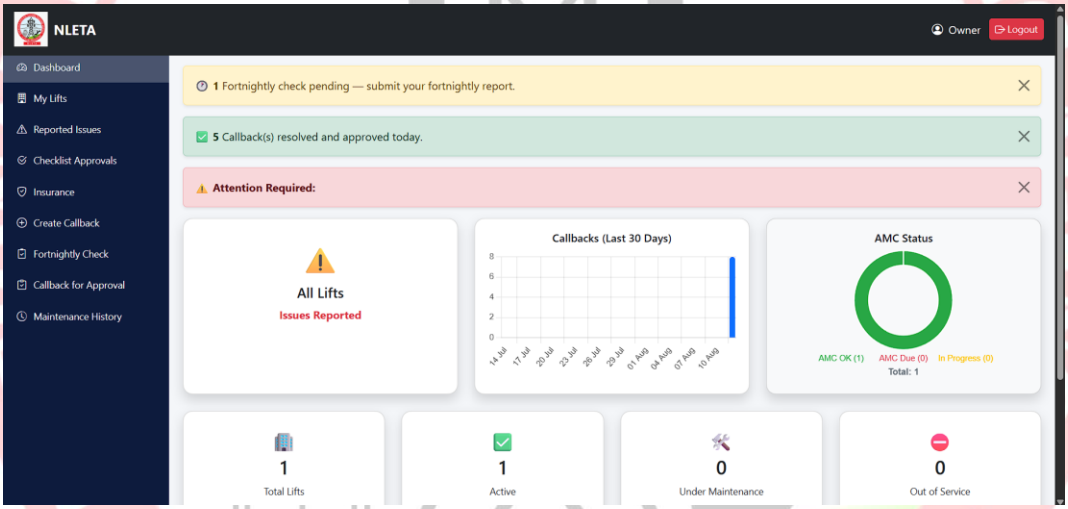

Each user sees only the features relevant to their role. This guide explains the basic workflow for Owners and Technicians.

1. Owner User Guide

The Owner dashboard allows an owner/RWA representative to monitor assigned lifts, maintenance status, insurance information, callbacks, and technician work reports.

1.1 Owner Dashboard

- View lifts assigned to the owner.
- Check current asset status.
- Check maintenance status such as OK, Due Soon, or Overdue.
- Review insurance status where available.
- Review maintenance/work history.

1.2 View My Lifts

1. Open My Lifts.
2. Find the required lift by name or location.
3. Review the lift status.
4. Check the maintenance column for the current maintenance condition.
5. Review the last work/history information.

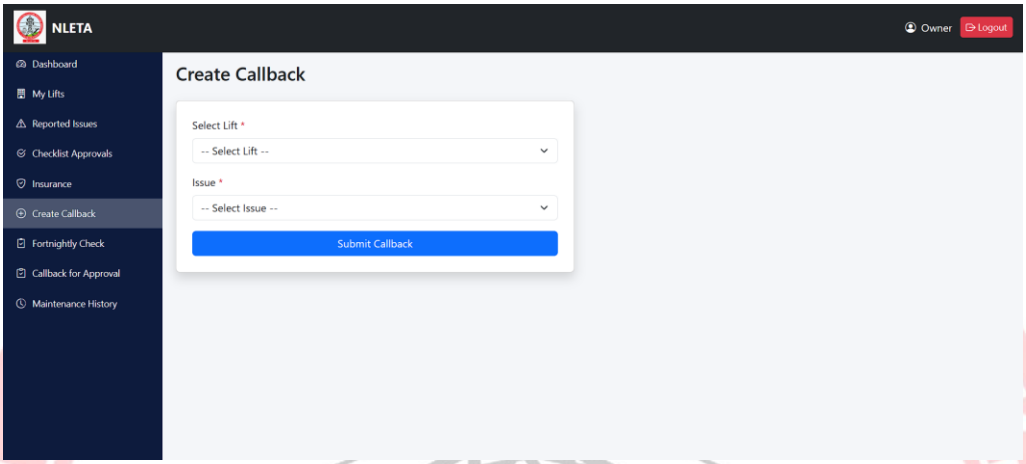

1.3 Review a Maintenance Report

6. Open the pending maintenance report.
7. Review the technician's checklist.
8. Read the work remarks/report.
9. Open any attached file when required.
10. Verify that the reported work is satisfactory.
11. Approve the report or reject it when correction is required.

- A rejected report can be returned to the technician for correction and re-submission.

1.4 Callbacks

12. Open the Callbacks section.
13. Review the reported issue.
14. Check the callback status.
15. Review the technician's submitted work report after completion.
16. Approve or take the required follow-up action according to the workflow.

1.5 Owner Checklist

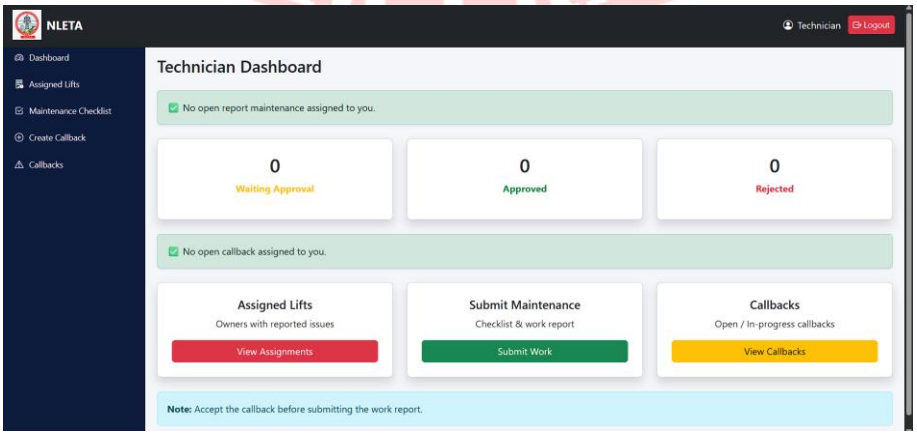

- Check lift status regularly.
- Monitor Due Soon and Overdue maintenance.
- Review technician reports promptly.
- Approve completed work when verified.
- Reject reports only when corrections are required.
- Review callbacks and their closure status.

2. Technician User Guide

The Technician dashboard is used to receive maintenance assignments, perform maintenance checks, handle callbacks, and submit work reports for owner approval.

2.1 Technician Dashboard

- View active maintenance work assigned to the technician.
- View maintenance due/overdue information when available.
- View waiting-approval, approved, and rejected work counts.
- View open callbacks.
- Access assigned lifts and report submission screens.

2.2 Assigned Lifts

17. Open Assigned Lifts.
18. Review the lift name and location.
19. Open the required assignment.
20. Review the maintenance/job information before starting work.

2.3 Complete a Maintenance Checklist

21. Open the assigned maintenance job.
22. Check each item that has been inspected and completed.
23. Use Select All only when every checklist item has actually been verified.
24. Enter clear remarks about the work performed.
25. Attach a supporting PDF, image, or document when required.
26. Submit the report for owner approval.

- Do not mark a checklist item as completed unless it has been physically checked.

2.4 Submit a Callback Report

27. Open Callbacks.
28. Select the callback assigned to you.
29. Confirm the callback number when prompted.
30. Complete the callback checklist.
31. Enter the work report describing the issue and corrective work.
32. Attach supporting evidence if required.
33. Submit the report.

- The callback is moved through the configured workflow after submission.

2.5 Rejected Maintenance Report

34. Open the rejected maintenance assignment.
35. Review what needs to be corrected.
36. Perform the required corrective work.
37. Update the checklist and remarks.
38. Re-submit the report for owner approval.

2.6 Technician Checklist

- Check the dashboard every day for new assignments.
- Review the lift and location before starting work.
- Complete every relevant checklist item accurately.
- Enter useful and specific work remarks.
- Upload supporting files when required.
- Submit completed work for owner approval.
- Check rejected reports and re-submit after correction.

3. Status Guide

Status	Meaning
Due Soon	Maintenance date is approaching according to the configured maintenance cycle.
Overdue	The calculated maintenance due date has passed.
Assigned	A maintenance job has been assigned to a technician.
In Progress	The technician is working on the assigned job.
Pending Owner	The technician has submitted the report and it is waiting for owner review.
Approved	The owner has approved the submitted work.
Rejected	The owner has rejected the report and correction/re-submission may be required.
Open	A callback or issue is currently open.
Closed	The callback/report has been submitted or closed according to the configured workflow.

4. Common Good Practices

- Always use your own login account.
- Keep passwords private.
- Check dates carefully when creating or reviewing maintenance information.
- Use accurate lift names, locations, and work descriptions.
- Do not approve a report without reviewing the submitted work.
- Do not submit a technician checklist without performing the inspection.
- Log out after completing your work.

5. Troubleshooting

If something does not appear as expected:

39. Refresh the dashboard.
40. Confirm that you are logged in with the correct role.
41. Check whether the asset, technician, owner, or job has been assigned correctly.
42. Check the maintenance date and maintenance interval.
43. Check the job/report status.
44. If the problem remains, contact the system administrator.

6. Quick Role Summary

Role	Main Responsibility	Key Sections	Main Action
Owner	Asset and work approval	My Lifts, Maintenance, Callbacks	Review and approve
Technician	Field maintenance work	Assigned Lifts, Checklist, Callbacks	Inspect and submit
